

HORSE WALKERS

Open centred roofs

A COLUMBUS open centred roof protects the track and the horses from each weather but allows light and fresh air in so that your horses are not cut of from the outside world. Our open centred roofs are built considering structural engineering calculations according to wind, snow and other environmental influences. All structural details are galvanized and quickly assembled.

- Steel construction divided into 12/14/16/19/22 sections consisting of IPE sections assembled on anchor bolts
- External enclosure consists of hardwood boards in steel frame 150cm high
- Other openings can be provided with wind gauze
- Roof consists of polyester coated box profile steel sheets
- The coated steel sheets are fixated on the steel bracing with special screws
- Our open centred roofs are equipped with a steel-framed sliding gate for easy access
